Naresh Saw

Senior DevOps / Platform Engineer | AWS | Kubernetes | CI/CD | Terraform | DevSecOps

Bangalore, India | +91 9123490027 | nareshsaw74@gmail.com | linkedin.com/in/nareshsaw2

Open to relocation – European Union

PROFESSIONAL SUMMARY

Senior DevOps and Platform Engineer with 7+ years of experience building, automating, and governing cloud-native infrastructure on AWS and Kubernetes for regulated enterprises in aviation and banking. At United Airlines, manages 20 Amazon EKS clusters, rolled out Karpenter autoscaling that cut CI compute costs by 20–25%, and owns CI/CD security and compliance governance across 500+ Harness pipelines. Hands-on with Amazon EKS, Terraform, Harness CI/CD, GitHub Actions, Argo CD (GitOps), Helm, and observability (Dynatrace, Prometheus, Grafana). AWS Certified DevOps Engineer – Professional, with an MBA in Project Management.

CORE SKILLS

Cloud: AWS (EKS, EC2, ECS, Lambda, S3, RDS, DynamoDB, IAM, VPC, CloudWatch, CLI)

Containers & Orchestration: Kubernetes, Amazon EKS, Karpenter, Red Hat OpenShift, Docker, Helm, Istio

CI/CD & GitOps: Harness CI/CD, GitHub Actions, Jenkins, Argo CD, IBM UrbanCode Deploy, Maven

DevSecOps & Compliance: Security scanning integration (SAST, SCA, IaC), Wiz, Veracode, SonarQube, Black Duck, pipeline security gates, AWS IAM least privilege, software supply-chain security, policy-as-code (OPA, Gatekeeper)

Infrastructure as Code: Terraform, Harness IaCM

Artifact & Source Control: JFrog Artifactory, Nexus, GitHub, Bitbucket, Git

Observability & Reliability: Dynatrace, Prometheus, Grafana, ELK Stack, Loki, Splunk, Jaeger; incident management, root cause analysis (RCA)

Scripting & OS: Python, Bash, Shell scripting, Groovy, Linux

Databases: MySQL, Oracle, MongoDB

AI & Automation: Model Context Protocol (MCP) server development, GenAI agent integration, Agent Skills authoring

Process & Tools: Agile / Scrum, Jira, Confluence

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer **Sep 2025 – Present**

United Airlines, Bangalore, India

- Manage 20 Amazon EKS clusters running containerised workloads with Docker and Helm, maintaining 99.9% platform availability while enforcing AWS IAM least-privilege access and Artifactory-backed artifact governance.
- Designed, tested, and rolled out Karpenter for node autoscaling on production CI EKS clusters, provisioning right-sized build capacity on demand and reducing CI compute costs by 20–25%.
- Own CI/CD security and compliance governance organisation-wide, building automated guardrails (policy-as-code with OPA) that enforce security scanning and pipeline standards across 500+ Harness pipelines used by 50+ engineering teams.
- Extended Wiz IaC security scanning to Terraform modules in Harness IaCM through additive, non-breaking changes, raising IaC scan coverage to 97% without disrupting delivery velocity.
- Enforced Veracode SAST security gates on 95% of CI/CD pipelines using per-stage skip logic and branch-based conditions, reducing code vulnerabilities by 40%+ while preserving developer throughput.
- Implemented GitOps-based change management for pipeline governance rules by syncing Harness with GitHub, with branch protection and PR-based review, making every change version-controlled and auditable.
- Lead root cause analyses (RCA) for production CI/CD incidents, author leadership-facing governance documentation, and drive corrective and preventive actions across platform teams.
- Delivered a GenAI automation proof of concept for the internal engineering platform, building Python-based Model Context Protocol (MCP) integrations for Atlassian (Jira, Confluence), Harness, and GitHub, plus reusable agent skills that automate routine CI/CD and issue-tracking workflows, saving 20 hours per week.

DevOps Engineer **Sep 2024 – Aug 2025**

LTIMindtree Ltd., Bangalore, India

- Automated and maintained CI/CD pipelines and release deployments using IBM UrbanCode Deploy and an enterprise CI platform, supporting 30+ applications.
- Deployed and managed 12 Red Hat OpenShift (Kubernetes) production clusters (2–4 nodes each), ensuring high availability and scalability.
- Designed monitoring, logging, and alerting with Grafana and the ELK Stack, reducing mean time to recovery (MTTR) by 20% through alert automation and proactive server health monitoring.

DevOps Engineer **Sep 2019 – Sep 2024**

CustomerXPs Software Pvt. Ltd., Bangalore, India

- Configured and deployed an enterprise Fraud Risk Management (FRM) platform on a microservices architecture for 10+ global banking clients, partnering closely with engineering teams.
- Provisioned AWS infrastructure with Terraform across multiple client environments, standardising infrastructure as code for consistent, repeatable deployments.
- Built and maintained CI/CD pipelines with Jenkins and Argo CD (GitOps), integrating SonarQube quality gates and Nexus artifact management.
- Automated manual operational processes, improving team efficiency by 15%, and saving 15 working hours per week.
- Improved monitoring reliability by 30% by integrating Prometheus and Grafana and built reporting tools to detect software issues proactively.
- Resolved complex production issues, authored standard operating procedures (SOPs), and represented engineering in client requirement discussions.

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional (January 2025)
- Certified Kubernetes Administrator (CKA) – Expected December 2026

EDUCATION

Master of Business Administration (MBA), Project Management | Dr. D. Y. Patil Vidyapeeth, Pune, India | 2024

Bachelor of Technology (B.Tech), Electrical and Electronics Engineering | Biju Patnaik University of Technology, Odisha, India | 2018
